EXECUTIVE SUMMARY

Introduction

Impact Fees are a mechanism for funding the public infrastructure necessitated by new development. Across the country, they are used to fund police and fire facilities, parks, schools, roads and utilities. In Texas, the legislature has allowed their use for water, wastewater, roadway and drainage facilities. Since 1989, they have been used to fund public water and wastewater improvements in the City of Fort Worth. Since 2008, they have been used to fund transportation infrastructure.

In the most basic terms, impact fees are meant to recover the incremental cost of the impact of each new unit of development creating new infrastructure needs. In the case of Transportation Impact Fees, the infrastructure need is the increased capacity on arterial roadways that serve the overall transportation system. The purpose of the 2022 Transportation Impact Fee Study is to identify the fee per unit of new development necessary to fund these improvements in accordance with the enabling legislation, Chapter 395 of the Texas Local Government Code.

Impact Fee Basics

Transportation Impact Fees are determined by several key variables, each described below in greater detail.

Impact Fee Study

The primary purpose of the 2022 Transportation Impact Fee Study is to determine the maximum impact fee per unit of new development chargeable as allowed by the state law. This determination is not a recommendation; the actual fee amount ultimately assessed is at the discretion of the Fort Worth City Council, so long as it does not exceed the maximum assessable allowed by law. The study looks at a period of 10 years to project new growth and corresponding capacity needs, as required by state law. The study and corresponding maximum fees must be restudied at least every five years. However, the study can be updated at any time to accommodate significant changes in any of the key variables of the impact fee equation.

Service Areas

A Service Area is a geographic area within which a unique maximum impact fee is determined. All fees collected within the Service Area must be spent on eligible improvements within the same Service Area. For Transportation Impact Fees, the Service Area may not exceed six miles. In Fort Worth, this restriction necessitated the creation of 28 separate Service Areas. A map of the Service Areas can be found on Page 14. However, no impact fees are collected in seven (7) of these Service Areas because no capacity related transportation improvement projects have been designated. With the 2022 Transportation Impact Fee Update, Service Areas L and W no longer have a calculated fee due to these areas being largely built out with minimal growth projected to occur over the next ten years. This brings the new total of no-fee service areas to nine (9) as of the 2022 update.

In defining the Service Area boundaries, the project team considered the corporate boundary, required size limit, adjacent land uses, and topography. Since each Service Area has a unique maximum impact fee, the per-unit maximum fee for an identical land use will vary from one Service Area to the next. For this reason, the team avoided drawing a Service Area boundary through uniform land uses where possible.

The 2022 Transportation Impact Fee study includes a study of the Service Areas to determine how they will be expanded as new land is annexed into the City Limits. As part of this study, Ultimate Service Area boundaries have been established. The Ultimate Service Areas show the future limits of existing service areas per the 6-mile limit in Chapter 395, and outline where Service Areas will be expanded in the future as land is annexed into the City after the adoption of this study. This will guide the City in knowing which Service Areas newly annexed land should be added to. As new land is annexed into the City in the future, the Transportation Impact Fee Study can be updated, the Service Area boundaries can be adjusted, and the Transportation Impact Fees for the expanded Service Areas can be recalculated.

Land Use Assumptions

The Impact Fee determination is required to be based on the projected growth and corresponding capacity needs in a 10-year window. This study considers the years 2022-2032. Acknowledging

that the parameters of the study (the corporate boundaries, Master Thoroughfare Plan, Comprehensive Plan, zoning maps, platting history, etc.) are changing constantly, this study is based on conditions as they were on June 30, 2022.

One of the key elements in the determination of the impact fee is the amount of new development anticipated over 10 years. In order to arrive at a reasonable projection of growth, staff compiled a team of subject-matter experts from the Development Services, Financial Management, Planning & Data Analytics, and Transportation & Public Works Departments to evaluate each of the nineteen (19) fee-charging service areas individually. A map of each service area was overlaid with an aerial photograph, preliminary and final plats, and the Future Land Use Plan defined in the Comprehensive Plan. The team that studied these maps was comprised of the staff that administers zoning, platting and pre-development applications; Master Thoroughfare Plan alignments; construction plan reviews; and planning efforts. Vacant parcels were discussed and projected to either develop by 2032 or to remain undeveloped at that time, based on zoning, platting and pre-development history, utility availability, and any additional information regarding development potential or stated intentions. It was assumed that vacant parcels without recorded zoning or platting information would develop according to the land use specified in the Comprehensive Plan.

Finally, tables were created to compare existing residential and employment data to the 10-year residential and employment figures anticipated in the Comprehensive Plan. These projections can be found in the Residential and Employment Projections tables beginning on Page 17. It is worth noting that the percentage of residential and employment expected by 2032 does not directly correlate to the percentage of the planned arterial network that will be required by that date. The Master Thoroughfare Plan, which defines the future arterial network, is not based solely on future growth projections; therefore, the percentage of the planned arterial network needed to accommodate future growth may exceed 100% of the total available thoroughfare network in some service areas.

Transportation Impact Fee Transportation Improvement Plan (TIP)

The Transportation Improvements Plan is distinct and separate from the City's traditional Capital Improvements Plan (CIP). The TIP is simply the list of projects eligible for funding through impact fees. Only those capacity improvements included in the City's adopted Master Thoroughfare Plan are included in the TIP. Capacity improvements may include the addition of lanes, intersection

improvements, or the extension of a new road. Resurfacing or other maintenance activities do not qualify as capacity improvements under impact fee law in Texas.

The cost of the TIP is one of the fundamental factors in the calculation of the per-unit maximum impact fee. The TIP's cost was calculated through systematic evaluation of each eligible project. The project team evaluated each project site to determine the project scope, the presence of any special conditions (such as the need for significant drainage improvements or railroad crossings) and whether various additional construction costs were applicable (such as construction phase traffic control). In determining project limits, the team identified roadway segments with uniform need. The team utilized a standard methodology for estimating construction costs once the project scope was defined. Referencing multiple arterial projects within Fort Worth and the immediate vicinity, uniform costs were determined for the major items of work, additional construction items, and project delivery costs. Section III provides a listing of the 10-Year Transportation Improvements Plan by service area in Tables 2.A – 2.Z and maps of the TIP by service area in Exhibits 4.A – 4.Z. Finally, detailed cost projections by project can be found in Appendix A. It should be noted that these cost projections are based on conceptual level planning and are subject to refinement upon final design. Also, note that on the detailed cost projections, where applicable, funds previously collected by the City for future improvements have been deducted from a project's eligible total.

Only those projects listed in the TIP are eligible to utilize impact fee funds. In order to optimize future flexibility, all capacity improvements included in the Master Thoroughfare Plan are included in the TIP and will be eligible to utilize impact fee funds. Some thoroughfare facilities were built solely by private development since 2017. These identified facilities were removed from the TIP project list in the 2022 Transportation Impact Fee Study. Master Thoroughfare Plan roadways in the Ultimate Service Area Boundaries but outside the City limits were not included in the TIP. As annexations occur, the Impact Fee Study can be updated to include these roadways in the TIP and the Transportation Impact Fees can be recalculated.

Only the costs associated with providing the additional capacity necessitated by 10 years of growth can be used to calculate the maximum impact fee. In order to calculate the maximum impact fee, the total cost of the TIP at build-out was reduced to account for (1) the portion of new capacity that will address existing needs, and (2) the portion of new capacity that will not be necessitated until

beyond the 10-year growth window. A ratio that compares 10 years' demand for capacity to the net supply of capacity (total new capacity in the TIP minus existing needs) can be calculated. That ratio, which may not exceed 100%, is then applied to the cost of the net capacity supplied. The result is a determination of the costs attributable to the next 10 years' growth, which is then used to calculate the maximum impact fee in accordance with state law. The result is known as the recoverable cost of the TIP.

Impact Fee Calculation

In simplest terms, the maximum impact fee allowable by law is calculated by dividing the recoverable cost of the TIP by the number of new service units of development. In accordance with state law, both the cost of the TIP and the number of new service units of development used in the equation are based on the growth and corresponding capacity needs projected to occur within a 10-year window. This calculation is performed for each service area individually; each service area has a stand-alone TIP and 10-year growth projection.

In practice, there are many factors that complicate this calculation. The maximum impact fee allowable by law for each service area is calculated in Table 8. A detailed discussion of the calculation precedes Table 8, beginning on Page 93.

Collection and Use of Transportation Impact Fees

Transportation Impact fees are assessed when a final plat is recorded. The assessment defines the impact of each unit at the time of platting, according to land use, and may not exceed the maximum impact fee allowed by law. Transportation Impact Fees are collected when a building permit is issued. Therefore, funds are not collected until development-impacts are introduced to the transportation system. Funds collected within a service area can be used only within the same service area. Finally, fees must be utilized within 10 years of collection, or must be refunded with interest. For Service Areas L and W, the remaining fund balances will be allocated towards debt service accrued prior to the 2022 Transportation Impact Fee Study to close out the accounts.

Adoption Process

Chapter 395 of the Texas Local Government Code stipulates a specific process for the adoption of Transportation Impact Fees. An Advisory Committee is required to review the Land Use Assumptions

and TIP used in calculating the maximum fee, and to provide the Committee’s findings for consideration by the City Council. This Advisory Committee also reviews the Transportation Impact Fee ordinance and provides its findings to the City Council. The composition of the Advisory Committee is required to adequately represent the building and development communities. The City Council then conducts a public hearing on the Land Use Assumptions, TIP and Impact Fee Ordinance. Since Transportation Impact Fees are already in place in the City Fort Worth, the 2022 Transportation Impact Fee Study only requires one public hearing. However, two public hearings may be held to assist in further educating the public and allowing time for review.

Following policy adoption, the Advisory Committee is tasked with advising the City Council of the need to update the Land Use Assumptions or the TIP at any time within five years of adoption. Finally, the Advisory Committee oversees the proper administration of the Impact Fee, once in place, and advises the Council as necessary.

2022 Transportation Impact Fee Study Results

Below is the listing of the 2022 Transportation Impact Fee Study’s Maximum Assessable Impact Fee Per Service Unit (Vehicle-Mile):

Service Area	Maximum Fee Per Service Unit (per Vehicle-Mile)	Service Area	Maximum Fee Per Service Unit (per Vehicle-Mile)
A	\$1,642	O	\$3,556
AA	\$355	PI	\$2,756
B	\$3,128	S	\$4,605
C	\$1,781	T	\$3,727
D	\$834	U	\$2,542
E	\$2,927	V	\$4,416
F	\$743	X	\$3,294
G	\$2,055	Y	\$2,588
M	\$6,367	Z	\$6,101
N	\$2,742		

I. INTRODUCTION

Texas Local Government Code Chapter 395 defines an Impact Fee as “a charge or assessment imposed by a political subdivision against new development in order to generate revenue for funding or recouping the costs of capital improvements or facility expansions necessitated by and attributable to the new development.”

Chapter 395 mandates that impact fees be studied at least every five (5) years. Accordingly, the City of Fort Worth has developed its Land Use Assumptions and TIP with which to implement Transportation Impact Fees. The City has retained Kimley-Horn and Associates, Inc. to provide professional transportation engineering services for the 2022 Transportation Impact Fee Study. This report includes details of the Transportation Impact Fee calculation methodology in accordance with Chapter 395, the applicable Land Use Assumptions, development of the Transportation Impact Fee TIP, and the Land Use Equivalency Table.

This report references two of the basic inputs to the Transportation Impact Fee:

- 1) **Land Use Assumptions** (Pg. 9)
- 2) **Transportation Improvements Plan (TIP)** (Pg. 19)

Information from these Land Use Assumptions and Transportation Impact Fee TIP is used extensively throughout the remainder of the report.

There is a detailed discussion of the methodology for the computation of impact fees. This discussion is broken into three components:

- 1) **Methodology for Transportation Impact Fees** (Pg. 59)
- 2) **Transportation Impact Fee Calculation** (Pg. 93)
- 3) **Plan for Financing and the Ad Valorem Tax Credit** (Pg. 94)

The components of the **Computation Method for Transportation Impact Fee** include development of:

- Service Areas (Pg. 60)
- Service Units (Pg. 60)
- Cost Per Service Unit (Pg. 62)
- Transportation Impact Fee TIP Costing Methodology (Pg. 62)
- Summary of Transportation Impact Fee TIP Costs (Pg. 66)
- Service Unit Calculation (Pg. 73)

The Transportation Impact Fee is then calculated as:

- Maximum Assessable Impact Fee Per Service Unit (Pg. 93)
- Service Unit Demand Per Unit of Development (Pg. 101)

The report also includes a section concerning the **Plan for Financing and the Ad Valorem Tax Credit**. This involves the calculation of the applicable credit required by law to offset the City's use of ad valorem taxes to help fund the Transportation Impact Fee TIP. This plan, prepared by NewGen Strategies, and upon which we relied, details the maximum assessable impact fee per service unit the City of Fort Worth may apply under Chapter 395 of the Texas Local Government Code.

II. LAND USE ASSUMPTIONS

A. Purpose and Overview

In order to assess an impact fee, Land Use Assumptions must be developed to provide the basis for residential and employment growth projections within a political subdivision. As defined by Chapter 395 of the Texas Local Government Code, these assumptions include a description of changes in land uses, densities, and development in the service area. The land use assumptions are then used in determining the need and timing of transportation improvements to serve future development.

In accordance with Chapter 395, information from the following sources was compiled to complete the land use assumptions:

- City of Fort Worth 2017 Transportation Impact Fee Study
- City of Fort Worth Comprehensive Plan
- Tarrant County Appraisal District (TAD)
- Denton County Appraisal District (DCAD)
- Parker County Appraisal District (PCAD)
- North Central Texas Council of Governments (NCTCOG)
- City of Fort Worth staff

The Land Use Assumptions include the following components:

- **Land Use Assumptions Methodology** – An overview of the general methodology used to generate the land use assumptions.
- **Transportation Impact Fee Service Areas** – Explanation of the division of Fort Worth into service areas for transportation facilities.
- **Residential and Employment**– Data on residential and employment growth within the service area over the next ten years (2022 – 2032).
- **Land Use Assumptions Summary** – A synopsis of the land use assumptions.

The residential and employment estimates and projections were compiled in accordance with the following categories:

Units: Number of dwelling units, both single and multi-family.

Employment: Square feet of building area based on three (3) different classifications. Each classification has unique trip making characteristics.

Retail: Land use activities which provide for the retail sale of goods which primarily serve households and whose location choice is oriented toward the household sector, such as grocery stores and restaurants.

Service: Land use activities which provide personal and professional services, such as government and other professional offices.

Basic: Land use activities that produce goods and services such as those which are exported outside of the local economy, such as manufacturing, construction, transportation, wholesale, trade, warehousing, and other industrial uses.

The above categories are used in the development of the assumptions for impact fees; however, expanded classifications used in the assessment of impact fees are found in the Land Use / Vehicle-Mile Equivalency Table.

B. Transportation Impact Fee Service Areas

The geographic boundary of the proposed impact fee service areas for transportation facilities is shown in **Exhibit 1**. The service areas in the 2022 Transportation Impact Fee Study are consistent with those in the previous Transportation Impact Fee Study, with only some modifications necessary in order to include annexations occurring since the previous study. The City of Fort Worth is divided into twenty-eight (28) service areas, each based upon the six (6) mile limit as required in Chapter 395. For transportation facilities, the service areas are limited to those areas within the current corporate limits. Therefore, areas within the extraterritorial jurisdiction (ETJ) (as of June 30, 2022) are excluded from this study. No impact fees are collected in seven (7) of these Service Areas because no capacity related transportation improvement projects have been designated. Two current Fee service areas L and W are being added as no-fee service areas, bringing the new total to nine (9). Service areas L and W were moved to “no-fee” status due to limited potential for further TIP projects and limited ongoing growth. The roadway projects proposed in the 2017 study have been completed. These nine (9) “no-fee” service areas were not analyzed in the 2022

Transportation Impact Fee Study. It should be noted that at locations where service area boundaries follow a City thoroughfare facility, the proposed boundary is intended to follow the centerline of the roadway, unless otherwise noted. In cases where a service area boundary follows the City Limits, only those portions of the transportation facility within the City Limits are included in the service area.

Ultimate Service Area Boundaries

The 2022 Transportation Impact Fee study includes a study of the Service Areas to determine how they will be expanded as new land is annexed into the City Limits. As part of this study, Ultimate Service Area boundaries have been established. The Ultimate Service Areas show the future limits of existing service areas per the 6-mile limit in Chapter 395, and outline where Service Areas will be expanded in the future as land is annexed into the City after the adoption of this study. This will guide the City in knowing which Service Areas newly annexed land should be added to. As new land is annexed into the City in the future, the Transportation Impact Fee Study can be updated, the Service Area boundaries can be adjusted, and the Transportation Impact Fees for the expanded Service Areas can be recalculated. For example, if land is annexed into the ultimate service area boundary of Service Area E that is not currently within the existing service area boundary of Service Area E, the study can be updated to expand the existing Service Area E to include the land in question. As the study is updated, Master Thoroughfare Plan (MTP) roadways being annexed into the City limits can be included in the TIP and the Transportation Impact Fees can be recalculated. The Ultimate Service Area Boundaries are shown in **Exhibit 2**.

C. Land Use Assumptions Methodology

The residential and non-residential growth projections formulated in this report were performed using reasonable and generally accepted planning principles. The following factors were considered in developing these projections:

- Character, type, density, and quantity of existing development;
- Current zoning plans;
- Future Land Use Plan (as currently adopted);
- Growth trends;
- Location of vacant land;
- Physical restrictions (i.e. flood plains, railroads); and
- Physical carrying capacity of Fort Worth.

The following was the process used to develop the land use assumptions:

Step 1: Determine Base Year (2022)

Existing residential and employment estimates were obtained using the 2017 Transportation Impact Fee Study, recent building permit data (2017 – 2022), and an aerial survey of existing development. For single-family and multi-family residential units, the number of units were simply counted from the building permit data. However, if the number of multi-family units was not available through the inventory, a density calculation was performed based on the building permit's livable building square footage. A conversion of square footage per unit was utilized to determine the number of units.

To estimate employment square footage, the livable building square footage data were utilized. Building footprint data and aeriels were utilized to supplement the building square footage if the building permit data lacked square footage information.

Step 2. Determine 10-Year Growth Projections

For the remaining undeveloped areas, assumptions based upon the City's Future Land Use Map (**Exhibit 3**) were used to estimate the growth potential of land within the Transportation Impact Fee study area for both residential and employment land uses. As a basis for determining the 10-year growth projections, recent plats (preliminary and final) and Pre-Development Conferences (PDCs) were obtained from City staff. This information was used to identify areas of growth in each service area. The Fort Worth Comprehensive Plan land use in the identified growth areas was used in combination with the plats, PDCs and reasonable density estimates to determine the number of dwelling units and square feet of employment over the next ten years.

The 10-Year Growth was calculated in three basic steps.

- 1) Determine the future land use for study area parcels based on previous planning efforts completed by the City.
- 2) Determine the number of dwelling units and amount of employment building space that could occupy every parcel – i.e. the parcel's buildable area – based on the plat, PDC, or the future land use development types.

- 3) Calculate the total number of residential dwelling units and employment square feet within the parcels expected to develop by 2032 in each service area.

Following completion of the 10-year growth projections, discussions were held with representatives from involved City departments (Planning & Data Analysis, Development Services, and Transportation & Public Works) to verify the identified growth areas and to refine future land use categories in each service area. In some service areas where rapid growth is anticipated, residential projections were adjusted to reflect growth similar to or slightly more aggressive than the growth trend over the previous five years (2017-2022).

Step 3. Compare to Historic Growth and Regional Growth Projections

Research of historical building permits was performed to compare the projected ten-year growth to the year 2032 with previous growth trends in the City of Fort Worth over the last five years. During the last five years, approximately 41,300 residential units and 54.4 million square feet of employment were developed in fee-eligible service areas. It is projected that the next ten years of development (2022-2032) will add 108,288 residential dwelling units and 88.9 million square feet of employment in the fee-eligible service areas (see **Table 6. 10-Year Growth Projections**).

D. Residential and Employment Results

Exhibit 1 presents the existing City limits and the proposed service areas, combined with the Future Land Use Plan (as currently adopted). **Table 1** summarizes the residential and employment projections within the City of Fort Worth for 2022-2032.

III. TRANSPORTATION IMPROVEMENTS PLAN

The City has identified the transportation projects needed to accommodate the projected growth within the City. The Transportation Improvements Plan (TIP) consists of four categories of projects. They are as follows:

- **Previous** – Previously completed projects with excess capacity available to serve new growth.
- **Widening** – Existing roadways not currently built to the City’s Master Thoroughfare Plan (MTP) classification, except for some facilities that were identified that are not anticipated to be built out to their ultimate classification.
- **Median** – Existing four-lane divided roadways with adequate median widths to accommodate additional lanes.
- **New** - All remaining projects needed to complete the MTP, including projects currently under construction.

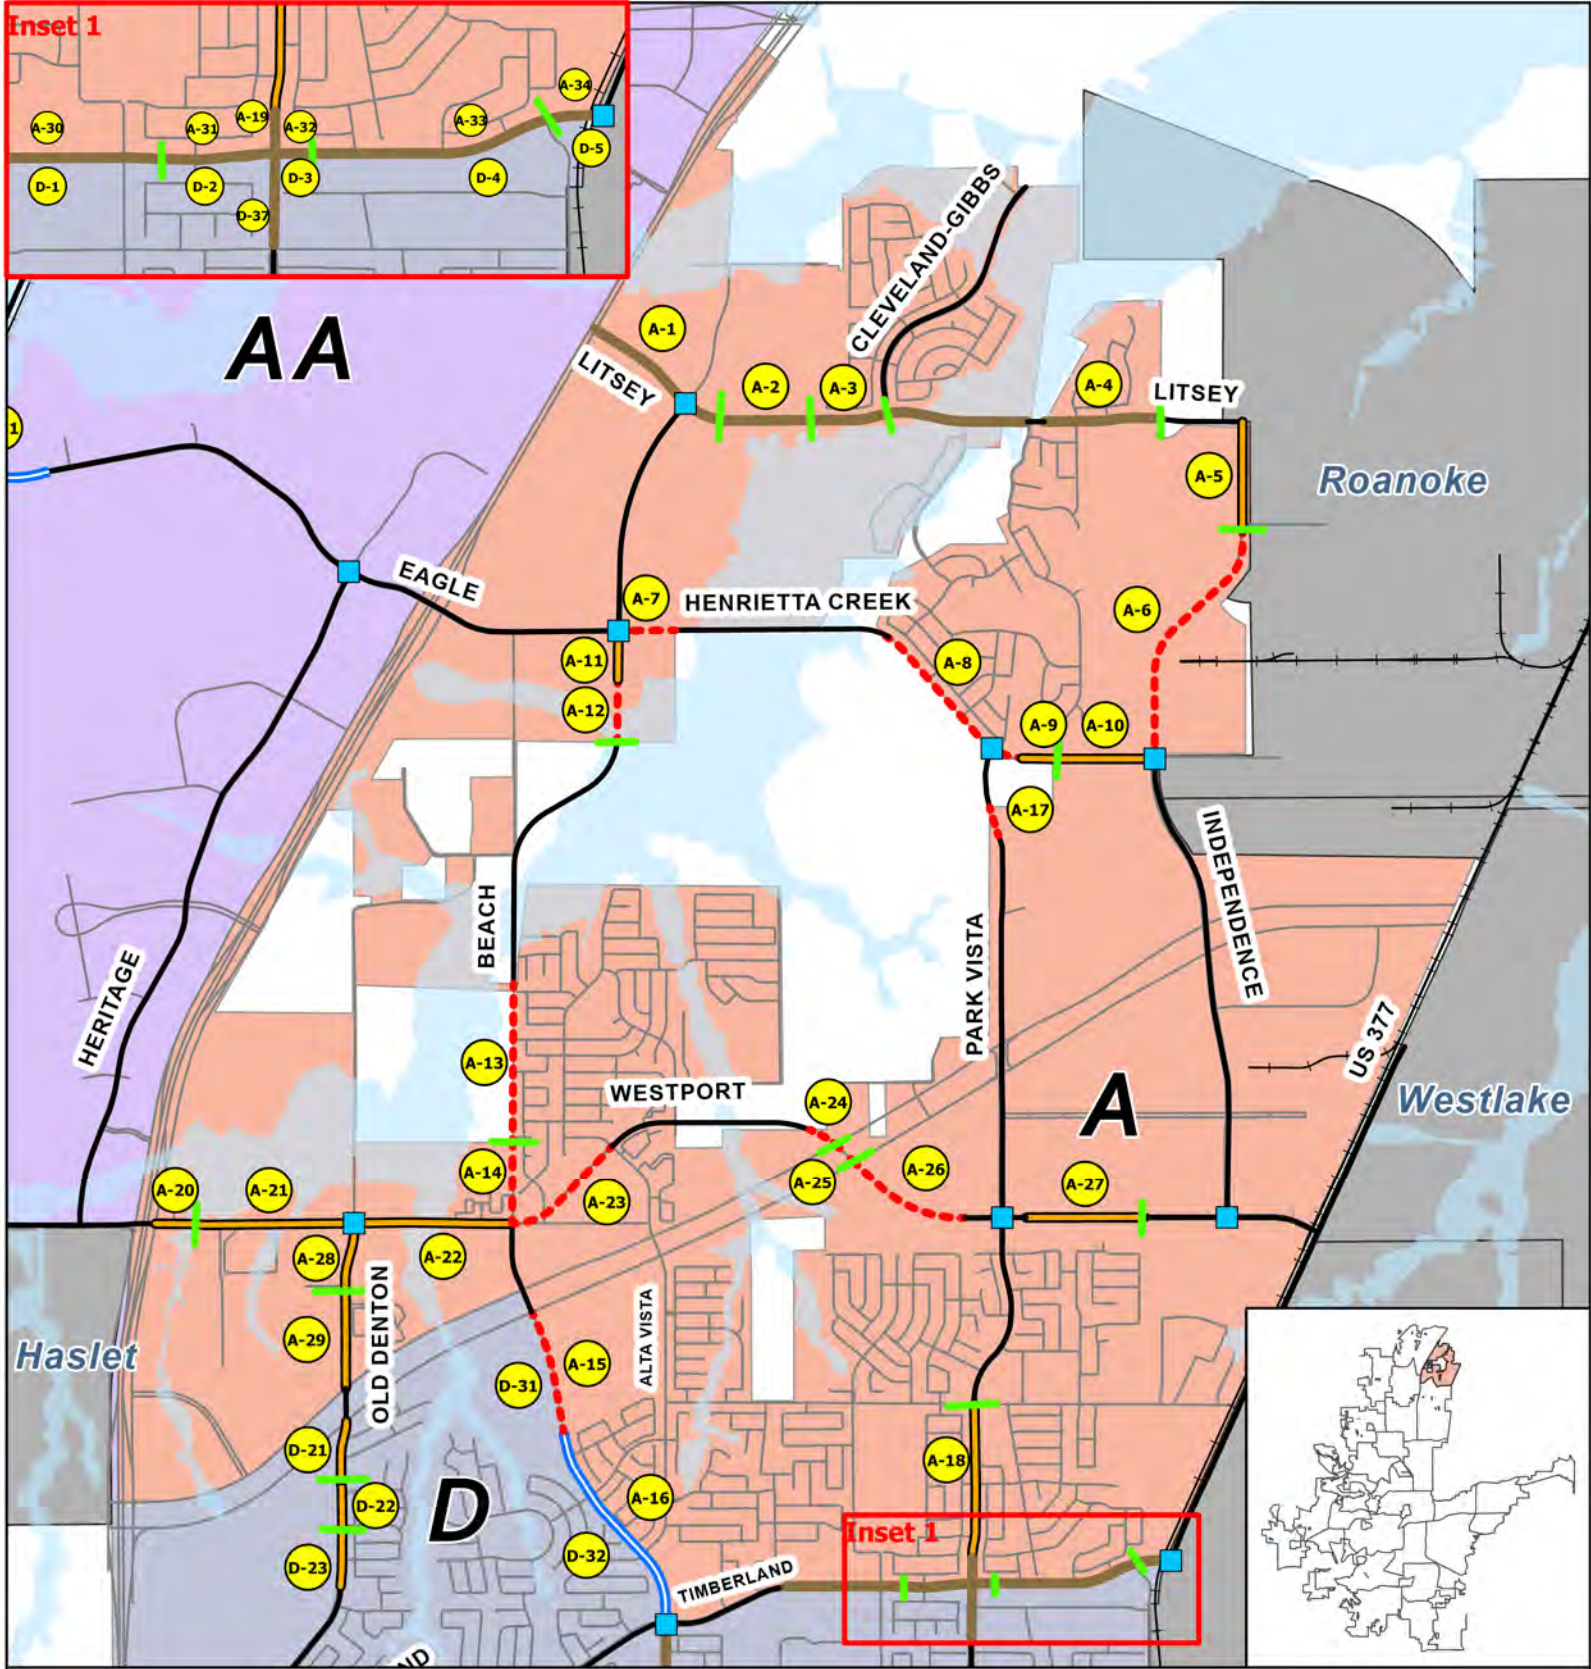

The TIP includes arterial class roadway facilities as well as major intersection improvements. All the roadway facilities identified are included in the MTP (as adopted on November 10, 2020). Intersection improvements were identified at an individual level based on the existing conditions of the intersecting thoroughfares. Rather than providing prescriptive improvements, each intersection identified is recommended to undergo an Intersection Capacity Evaluation (ICE) to determine appropriate capacity improvements. The cost estimate provided at each intersection includes the cost of the ICE plus any specific improvements identified. No new improvements were identified at intersections which have been fully expanded and signalized or built as a multi-lane roundabout. Intersection improvements were categorized as follows:

- **New** – Improvements identified at future intersections. The estimated cost for additional intersection improvements at a new intersection are lower than the cost of existing intersections due to much of the infrastructure being included in the roadway segment projects.
- **Rebuild** – Improvements identified at existing intersections with one or more legs planned to be rebuilt or widened based on the Impact Fee TIP. These improvements

are assumed to take place as part of the widening and/or reconstruction of the adjacent roadway.

- **Retrofit** – Improvements identified at established intersections. This includes the conversion of an all-way stop-controlled intersection to a roundabout or adding additional turn lanes to a signalized intersection.

The proposed TIP is listed in **Tables 2.A – 2.Z** and mapped in **Exhibits 4.A – 4.Z**. The tables show the length of each project as well as the facility’s MTP classification. The TIP was developed in conjunction with input from City of Fort Worth staff and represents projects that will be needed to accommodate the growth projected in the Land Use Assumptions section of this report.

IV. METHODOLOGY FOR TRANSPORTATION IMPACT FEES

A. Service Areas

The 28 service areas used in the 2022 Transportation Impact Fee Study are shown in the previously referenced **Exhibit 1**. These service areas cover the entire corporate area of the City of Fort Worth. Chapter 395 of the Texas Local Government Code specifies that “the service area is limited to an area within the corporate boundaries of the political subdivision and shall not exceed six (6) miles.” The service areas in the 2022 Transportation Impact Fee Study are consistent with those in the previous Transportation Impact Fee Study with some modifications to include annexations since the previous study. Previously, there were seven (7) no-fee service areas. With the 2022 Transportation Impact Fee Update, Service Areas L and W no longer have a calculated fee, bring the total of no-fee service areas to nine (9).

B. Service Units

The “service unit” is a measure of consumption or use of the capital facilities by new development. In other words, it is the unit of measure used in the 2022 Transportation Impact Fee Study to quantify the supply and demand for roads in the City. For transportation purposes, the service unit is defined as a vehicle-mile. Below is the definition for vehicle-mile.

Vehicle-Mile: The capacity consumed in a single lane in the peak hour by a vehicle making a trip one mile in length. The peak hour is used as the basis for transportation planning and the estimation of trips caused by new development.

Total Vehicle-Miles of Supply: Based on the total length (miles), number of lanes, and capacity (vehicles per hour) provided by the Fort Worth MTP (see **Appendix B**).

Total Vehicle-Miles of Demand: Based on the 10-year growth projections (Pg. 90). The demand is equal to the peak hour Trip Rate (trips) * Trip Length (miles).

The capacity values used in the 2022 Transportation Impact Fee Study are based upon Thoroughfare Capacity Criteria published by the North Central Texas Council of

Governments (NCTCOG) and applied to City of Fort Worth thoroughfare standards. **Tables 3A and 3B** show the service volumes as a function of the facility classification and type.

Table 3A. Service Volumes for Proposed Facilities
(used in Appendix B – Transportation Impact Fee TIP Service Units of Supply)

Roadway Type*	Description	Hourly Vehicle-Mile Capacity per Lane-Mile of Roadway Facility
3U	Three lane undivided (two-way left-turn lane)	650
4D	Four lane divided	700
5U	Five lane undivided (two-way left-turn lane)	650
6D	Six lane divided	700

*There are no 4U (four lane undivided) or two lane facilities designated in the TIP

Table 3B. Service Volumes for Existing Facilities
(used in Appendix C – Existing Roadway Facilities Inventory)

Roadway Type	Description	Hourly Vehicle-Mile Capacity per Lane-Mile of Roadway Facility
2U-R	Rural Cross-Section (i.e., gravel, dirt, etc.)	150
2U-H	Two lane undivided – Arterial Type	700
2U	Two lane undivided	425
3U	Three lane undivided (two-way left-turn lane)	650
4U	Four lane undivided	650
4D	Four lane divided	700
5U	Five lane undivided (two-way left-turn lane)	650
6D	Six lane divided	700

C. Cost Per Service Unit

A fundamental step in the impact fee process is to establish the cost for each service unit. In the case of the Transportation Impact Fee, this is the cost for each vehicle-mile of travel. Thus, it is the cost to construct a roadway (lane-mile) needed to accommodate a vehicle-mile of travel. The cost per service unit is calculated for each service area based on the roadway projects within that service area.

The second component of the cost per service unit is the determination of the number of service units in each service area. This number is the measure of the growth in transportation demand that is projected to occur in the ten-year period.

D. Cost of the TIP

All of the project costs for an arterial or collector facility which serves the overall transportation system are eligible to be included in the Transportation Impact Fee Transportation Improvements Plan. Chapter 395 of the Texas Local Government Code specifies that the allowable costs are "...including and limited to the:

1. Construction contract price;
2. Surveying and engineering fees;
3. Land acquisition costs, including land purchases, court awards and costs, attorney's fees, and expert witness fees; and
4. Fees actually paid or contracted to be paid to an independent qualified engineer or financial consultant preparing or updating the capital improvements plan who is not an employee of the political subdivision."

The engineer's opinion of the probable costs of the projects in the Transportation Impact Fee TIP is based, in part, on the calculation of a unit cost of construction. This means that a cost per linear foot of roadway is calculated based on an average price for the various components of roadway construction. This allows the probable cost to be determined by the type of facility being constructed, the number of lanes, and the length of the project. The cost for location specific items such as bridges, highway ramps, drainage structures, and any other special components are added to each project, as appropriate. The following is a

detailed description of the costing worksheet/methodology for the Transportation Impact Fee TIP.

1. Overview of Transportation Impact Fee TIP Costing Worksheets

For each project a specific costing worksheet was developed (see **Appendix A**). Each worksheet contained the following four (4) main components:

- Project Information,
- Construction Pay Items,
- Construction Component Allowances and
- Summary of Costs and Allowances

City of Fort Worth		Kimley-Horn and Associates, Inc.

Impact Fee Project Cost TOTAL:			\$ 2,272,000

1. Project Information

In order to correctly estimate the cost of a roadway project, several attributes are first identified:

- Project Number – Identifies which Service Area the project is in with a corresponding number. The corresponding number does not represent any prioritizations and is used only to identify projects. For example, Project A-10 is in Service Area A and is the 10th project on the list.
- Name – A unique identifier for each project. In some cases abbreviations are used for the project name.
- Limits – Represents the beginning and ending location for each project.
- Impact Fee Class – The costing class to be used in the analysis. The impact fee class provides the width for the various elements in the roadway. The construction costs are variable, based on the MTP classification of the roadway. The explanation of the MTP classification codes can be found on Page 5 of the City of Fort Worth’s *Master Thoroughfare Plan*. Additional classifications are utilized in cases where a portion of the facility currently exists and the road is only to be widened, or where the road is planned to be widened to an interim configuration. The following notations are used for these projects:
 - “(1/2)” for facilities where half the facility still needs to be constructed;
 - “(1/3)” for existing four lane arterial facilities where two additional median lanes are needed to complete their ultimate six lane configuration; and
 - “(W)” for future six-lane arterial facilities where four lanes with a wide median will be built as an interim configuration for an ultimate six lane facility.
- Ultimate Class – The functional classification on Fort Worth’s MTP.
- Length (ft) – The distance measured in feet that is used to cost out the project.
- Service Area(s) – Represents the service areas where the project is located. In some cases the project is located partially in the ETJ.
- Description – Used to describe the project type assumed in the costing such as a widening or reconstruction.

2. Construction Pay Items

A typical roadway project consists of a number of costs, including the following: planning, survey, design engineering, permitting, right-of way acquisition, and construction and inspection. While the construction cost component of a project may actually consist of approximately 100 various pay items, a simplified approach was used for developing the conceptual level project costs. The pay items used in the 2022 Transportation Impact Fee TIP are as follows:

- Unclassified street excavation;
- Lime Stabilization;
- Concrete pavement;
- Curb and gutter;
- Topsoil;
- Sidewalk; and
- An Allotment for auxiliary lanes and median openings.

3. Construction Component Allowances

A percentage of the paving construction cost is allotted for various major construction component allowances, as appropriate. These allowances include preparation of right-of-way, traffic control, pavement markings and signage, roadway drainage, illumination, minor water and sewer adjustments, establish turf/erosion control, and basic landscaping. These allowance percentages are also based on historical data. In addition, lump sum dollar allowances are provided for special drainage structures, and railroad crossings. The paving and allowance subtotal is given a fifteen percent (15%) contingency.

4. Summary of Cost and Allowances

To determine the total Impact Fee Project Cost, eighteen percent (18%) of the construction cost total is added for engineering, surveying, and testing and an addition five percent (5%) for mobilization. Percentages are also allotted ROW/easement acquisition. ROW/easement acquisition was based on whether the project was an existing alignment or future alignment. For an existing alignment, the ROW/easement acquisition cost was provided an allotment equal to 10% of the construction cost total. For a new alignment, the ROW/easement

acquisition cost was equal to 20% of the construction cost total. The value for ROW/easement acquisition is an estimated contribution allocation and does not represent actual ROW/easement acquisition needs. Cash funds allocated from the Transportation Impact Fees Legacy Fund have been subtracted from the corresponding City projects.

The Impact Fee Project Cost Total is then the Construction Cost Total plus engineering, surveying, and testing; plus Mobilization, plus ROW/easement acquisition; and minus roadway escrow agreements. Based upon discussions with City of Fort Worth staff, state highway projects were excluded from the 2022 TIP.

E. Summary of Transportation Impact Fee TIP Costs

Tables 4.A – 4.Z are the 10-Year Transportation Impact Fee TIP project lists for each service area with planning level project costs. Individual project cost worksheets can be seen in **Appendix A**, Conceptual Level Project Cost Projections. It should be noted that these tables reflect only conceptual-level opinions or assumptions regarding the portions of future project costs that are recoverable through impact fees. Actual project costs are likely to change with time and are dependent on market and economic conditions that cannot be predicted.

The Transportation Impact Fee TIP establishes the list of projects for which Impact Fees may be utilized. Projects not included in the Transportation Impact Fee TIP are not eligible to receive impact fee funding. The cost projections utilized in this study should not be utilized for the City's construction CIP.

- a. These planning level cost projections have been developed for Impact Fee calculations only and should not be used for any future Transportation Improvement Projects within the City of Fort Worth.
- b. These planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.

F. Service Unit Calculation

The basic service unit for the computation of Fort Worth's Transportation Impact Fees is the vehicle-mile of travel during the highest peak-hour (as explained on Pg. 60). To determine the cost per service unit, it is necessary to project the growth in vehicle-miles of travel for the service area for the ten-year period.

The growth in vehicle-miles from 2022 to 2032 is based upon projected changes in residential units and employment for the period. To determine this growth, estimates of residential units, basic employment, service employment, and retail employment for 2022 were made, along with growth projections for each of these demographic statistics through 2032. The Land Use Assumptions section of this report details the growth estimates used for impact fee determination.

For the purposes of impact fees, all developed and developable land is categorized as either residential or non-residential. For residential land uses, the existing and projected number of dwelling units are estimated. The number of dwelling units in each service area is multiplied by a *transportation demand factor* (discussed in more detail below) to compute the vehicle-miles of travel that occur during the afternoon peak hour. This factor indicates the average amount of demand created by the residential land uses in the service area.

For employment land uses, the process is similar. The Land Use Assumptions section of this report provides existing and projected number of building square footages for three (3) categories of employment – basic, service, and retail. These categories correspond to basic categories of land uses utilized in the City's Master Thoroughfare Plan.

Building square footage is the most common independent variable for the estimation of non-residential trips in the *Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition*. This characteristic is more appropriate than the number of employees, because building square footage is tied more closely to trip generation and is known at the time of application for any development that would require the assessment of an impact fee.

The existing and projected land use assumptions for the dwelling units and the square footage of basic, service, and retail land uses provide the basis for the projected increase in vehicle-miles of travel. As noted earlier, a *transportation demand factor* is applied to these values and then summed to calculate the total peak hour vehicle-miles of demand for each service area.

The *transportation demand factors* are aggregate rates derived from two sources – the *ITE Trip Generation Manual, 11th Edition* and the National Household Travel Survey performed by the Federal Highway Administration (FHWA). The *ITE Trip Generation Manual, 11th Edition* provides the number of trips that are produced or attracted to the land use for each dwelling unit, square foot of building, or other corresponding unit. For the retail category of land uses, the rate is adjusted to account for the fact that a percentage of retail trips are made by people who would otherwise be traveling past that particular establishment anyway, such as a trip between work and home. For example, a stop at a nearby supermarket on the way home from work does not create a new trip onto the roadway network. These trips are called *pass-by trips*, and since the travel demand is accounted for in the land use calculations relative to the primary trip, it is necessary to discount the retail trip generation rates to avoid double counting trips.

The next component of the *transportation demand factor* accounts for the length of each trip. The average trip length for each category is based on the National Household Travel Survey conducted by the FHWA.

The computation of the *transportation demand factor* is based on the following equation:

Variables:

$$TDF = T * (1 - P_b) * L_{max}$$

where... $L_{max} = \min(L * OD \text{ or } 6)$

- TDF = Transportation Demand Factor,
- T = Trip Rate (peak hour trips / unit),
- P_b = Pass-By Discount (% of trips),
- L_{max} = Maximum Trip Length (miles),
- L = Average Trip Length (miles), and
- OD = Origin-Destination Reduction (50%)

The maximum trip length was limited to six (6) miles based on the maximum trip length within each service area. Chapter 395 of the Texas Local Government Code allows for a service area of six (6) miles, and the service areas within Fort Worth are closely approximated with a six (6) mile distance.

The adjustment made to the average trip length statistic in the computation of the maximum trip length is the origin-destination reduction. This adjustment is made because the Transportation Impact Fee is charged to both the origin and destination end of the trip. For example, impact fee methodology will account for a trip from home to work within Fort Worth to both residential and non-residential land uses. To avoid counting these trips twice as both residential and non-residential trips, a 50% origin-destination (OD) reduction factor is applied. Therefore, only half of the trip length is assessed to each land use, and the total trip is only counted once. This methodology is consistent with that used in the National Household Travel Survey.

Table 5 shows the derivation of the *Transportation Demand Factor* for the residential land uses and the three (3) non-residential land use categories. The values utilized for all variables shown in the *transportation demand factor* equation are also shown in the table. These three non-residential land use categories represent the most common assumptions and should be used as default values for basic (industrial), service (office) and retail (commercial) uses since they formulate the basis of the impact fee study.

Table 5. Transportation Demand Factor Calculations

Variable	Residential	Basic	Service	Retail
T	0.94	0.74	1.52	5.19
P_b	0%	0%	0%	34%
L	9.79	10.02	14.65	5.60
L_{max}*	4.90	5.01	6.00	2.80
TDF	4.61	3.71	9.12	9.60

* L_{max} is less than 6 miles for residential and retail land uses; therefore this lower trip length is used for calculating the TDF for these land uses.

Variables:

- TDF = Transportation Demand Factor,
- T = Trip Rate (peak hour trips / unit),
- P_b = Pass-By Discount (% of trips),
- L_{max} = Maximum Trip Length (miles),
- L = Average Trip Length (miles), and
- OD = Origin-Destination Reduction (50%)

The application of the demographic projections and the *transportation demand factors* are presented in the 10-Year Growth Projections in **Table 6**. This table shows the total vehicle-miles by service area for the years 2022 and 2032. These estimates and projections lead to the Vehicle-Miles of Travel for both 2022 and 2032. The ultimate vehicle-mile carrying capacity of each service area is also shown.

Table 6. 10-Year Growth Projections

V. TRANSPORTATION IMPACT FEE CALCULATION

A. Maximum Assessable Impact Fee Per Service Unit

This section presents the maximum assessable impact fee rate calculated for each service area. The maximum assessable impact fee is the sum of the eligible Transportation Impact Fee TIP costs for the service area divided by the growth in travel attributable to new development projected to occur within the 10-year period. A majority of the components of this calculation have been described and presented in previous sections of this report. The purpose of this section is to document the computation for each service area and to demonstrate that the guidelines provided by Chapter 395 of the Texas Local Government Code have been addressed. **Table 7** illustrates the computation of the maximum assessable impact fee computed for each service area. Each row in the table is numbered to simplify explanation of the calculation. The calculation of the maximum assessable impact fee is shown in **Table 8**. Each row in the table is numbered to simplify explanation of the calculation. The Transportation Impact Fee TIP consists of both roadway segment and intersection improvements. The roadway segment component is referred to as the “Roadway Impact Fee TIP,” while the intersection component is referred to as the “Intersection Impact Fee TIP.”

Table 7. Maximum Assessable Transportation Impact Fee Computation

Line	Title	Description
1	<i>Total Vehicle-Miles of Capacity to be Added by the Roadway Impact Fee TIP</i>	The total number of vehicle-miles added to the service area based on the capacity, length, and number of lanes in each project (from Appendix B – TIP Units of Supply)

Each project identified in the TIP will add a certain amount of capacity to the City’s roadway network based on its length and classification. This line displays the total amount added within each service area.

2	<i>Total Vehicle-Miles of Existing Demand</i>	A measure of the amount of traffic currently using the roadway facilities upon which capacity is being added. (from Appendix B – TIP Units of Supply)
---	---	---

A number of facilities identified in the TIP have traffic currently utilizing a portion of their existing capacity. This line displays the total amount of capacity along these facilities currently being used by existing traffic and applies only to roadways on the TIP.

3	<i>Total Vehicle-Miles of Existing Deficiencies</i>	Number of vehicle-miles of travel that are not accommodated by the existing roadway system (from Appendix C – Existing Roadway Facilities Inventory)
---	---	--

In order to ensure that existing deficiencies on the City’s roadway network are not recoverable through impact fees, this line is based on the entire roadway network within the service area. Any roadway within the service area that is deficient – even those not identified on the Transportation Impact Fee TIP – will have these additional trips removed from the calculation.

4	<i>Net Amount of Vehicle-Miles of Capacity Added</i>	A measurement of the amount of vehicle-miles added by the Transportation Impact Fee TIP that will not be utilized by existing demand (Line 1 – Line 2 – Line 3)
----------	--	--

This calculation identifies the portion of the Transportation Impact Fee TIP (in vehicle-miles) that may be recoverable through the collection of impact fees.

5	<i>2022-2032 Vehicle-Miles of New Demand Based on Future Land Use Plan</i>	Based upon the growth projection provided in the Land Use Assumptions , an estimate of the number of new vehicle-miles within the service area over the next ten years. (from Table 6)
----------	--	---

This line presents the amount of growth (in vehicle-miles) projected to occur within each service area over the next ten years

6	<i>Chapter 395 Check</i>	If the net amount vehicle-miles of capacity to be added (Line 4) is less than the 2022-2032 vehicle-miles of new demand (Line 5) the Chapter 395 check is satisfied.
----------	--------------------------	--

In order to ensure that the vehicle-miles added by the Roadway Impact Fee TIP do not exceed the amount needed to accommodate growth beyond the ten-year window, a comparison of the two values is performed. If the amount of vehicle-miles added by the Roadway Impact Fee TIP exceeds the growth projected to occur in the next ten years, the Roadway Impact Fee TIP cost is reduced accordingly.

7	<i>Total Cost of the Roadway Impact Fee TIP within the Service Area</i>	The total cost of the roadway projects within each service area (from Table 4: 10-Year Transportation Impact Fee Transportation Improvements Plan with Conceptual Level Cost Opinions)
----------	---	---

This line simply identifies the total cost of all the roadway projects identified in each service area.

8	<i>Percent of Roadway Capacity Added Attributable to New Growth</i>	The result of dividing the net amount of vehicle-miles to be added (Line 4) by the total amount of vehicle-miles to be added by the Roadway Impact Fee TIP (Line 1).
----------	---	---

In order to ensure that the capacity added by the Roadway Impact Fee TIP does not exceed the amount needed to accommodate growth beyond the ten-year window, the anticipated capacity supplied in each service area to support new growth is calculated as a percentage of the total capacity to be added.

9	<i>Cost of Roadway Impact Fee TIP Attributable to New Growth</i>	The result of multiplying the Total Cost of the Roadway Impact Fee TIP (Line 7) by the Percent of Capacity Added Attributable to New Growth, limited to 100% (Line 8).
----------	--	--

This value is the total Roadway Impact Fee TIP project costs (excluding financial costs) that may be recovered through impact fees. This line is determined considering the limitations to impact fees required by the Texas legislature.

10	<i>Cost to Meet Demand Not Attributable to Growth</i>	The difference between the Total Cost of the Roadway Impact Fee TIP (Line 7) and the Cost of the Roadway Impact Fee TIP Attributable to New Growth (Line 9). (Line 7 – Line 9)
-----------	---	--

This line is provided for information purposes only – it is to present the portion of the total cost of the Transportation Impact Fee TIP that is required to meet existing demand.

11	<i>Total Cost of the Intersection Impact Fee TIP within the Service Area</i>	The total cost of the intersection projects within each service area (from Table 4 : 10-Year Transportation Impact Fee Transportation Improvements Plan with Conceptual Level Cost Opinions)
-----------	---	---

This line simply identifies the total cost of all the intersection projects identified in each service area.

12	<i>Percent of Intersection Capacity Added Attributable to New Growth</i>	The result of dividing Total Vehicle-Miles of New Demand (Line 5) by the 10-Year increase in vehicle-miles capacity in each service area (Table 6).
-----------	---	---

In order to ensure that the capacity added by the Intersection Impact Fee TIP does not exceed the amount needed to accommodate growth beyond the ten-year window, the anticipated vehicle mile growth in each service area is calculated as a percentage of the projected 2032 vehicle-mile demand.

13	<i>Cost of Intersection Impact Fee TIP Attributable to New Growth</i>	The result of multiplying the Total Cost of the Intersection TIP (Line 11) by the Percent of Intersection Capacity Added Attributable to New Growth (Line 12). (Line 11 * Line 12)
-----------	--	---

This value is the total Intersection Impact Fee TIP project cost (excluding financial costs) that may be recovered through impact fees. This line is determined considering the limitations to impact fees required by the Texas legislature.

14	<i>Cost of Transportation Impact Fee TIP Attributable to New Growth</i>	The result of adding the Cost of the Roadway Impact Fee TIP Attributable to new growth (Line 9) to the Cost of the Intersection Impact Fee TIP Attributable to new growth (Line 13). (Line 9 + Line 13)
-----------	--	--

This value is the total Transportation Impact Fee TIP project cost (excluding financial costs) that may be recovered through impact fees. This line is determined considering the limitations to impact fees required by the Texas legislature.

B. Plan for Financing and the Ad Valorem Tax Credit

Chapter 395 of the Texas Local Government Code requires the Transportation Impact Fee Transportation Improvements Plan for Transportation Impact Fees to contain specific enumeration of a plan for awarding the impact fee credit. Section 395.014 of the Code requires:

- (A) a credit for the portion of ad valorem tax and utility service revenues generated by new service units during the program period that is used for the payment of improvements, including the payment of debt, that are included in the transportation improvements plan; or
- (B) In the alternative, a credit equal to 50 percent of the total projected cost of implementing the transportation improvements plan...”

The plan is summarized, as prepared by NewGen Strategies in **Appendix D** and **Appendix E**, Summary of Transportation Impact Fee Credit Determination. The following table summarizes the portions of **Table 7** that utilize this credit calculation.

Line	Title	Description
15	Financing Costs	(from Appendix D – Transportation Impact Fee Credit Determination)
16	Interest Earnings	(from Appendix D – Transportation Impact Fee Credit Determination)
17	Existing Impact Fee Fund Balance	The available impact fee funds in each service area as of June 30, 2022.
18	Cost of the Transportation Impact Fee TIP and Financing Attributable to New Growth	The sum of the Cost of Capacity Added Attributable to New Growth, Financing Costs, and Interest Earnings. (Line 14 + Line 15 + Line 16 – Line 17)
19	Pre-Credit Maximum Fee Per Service Unit	Found by dividing the Cost of the TIP and Financing Attributable to New Growth (Line 18) by the Total Vehicle-Miles of New Demand Over Ten Years (Line 5). (Line 18 / Line 5)
20	Credit for Ad Valorem Taxes	A credit for the portion of ad valorem taxes projected to be generated by the new service units, as per Section 395.014 of the Local Government Code. (from Appendix D – Transportation Impact Fee Credit Determination)
21	Recoverable Cost of the Transportation Impact Fee TIP and Financing	The difference between the Cost of the TIP and Financing Attributable to New Growth (Line 18) and the Credit for Ad Valorem Taxes (Line 20). (Line 18 + Line 20)
22	Maximum Assessable Fee Per Service Unit	Found by dividing the Recoverable Cost of the TIP and Financing (Line 21) by the Total Vehicle-Miles of New Demand Over Ten Years (Line 5). (Line 21 / Line 5)

C. Maximum Assessable Impact Fee Determination

The impact fee determination method employed by NewGen Strategies and Solutions, LLC is developed through a financial based model, which fully recognizes the requirements of Chapter 395, including the recognition of cash and/or debt financing, interest earnings, fund balances, and applicable credits associated with the use of ad valorem taxes. In developing the components of the financial model several assumptions must be made, including the following:

- Financing
 - Method of financing (i.e. cash or debt financing)
 - The level of financing (e.g. 67% debt / 33% cash)
 - Cost of financing
 - Debt repayment structure
- Timing and Level of Expenditures and Revenues
- Interest Earnings
- Annual Vehicle Mile Growth
- Portion of Ad Valorem Tax Revenue Used to Fund Impact Fee Transportation Improvements

The assumptions employed in the maximum assessable impact fee determination provide a reasonable basis for forecasting, however, it must be emphasized that these assumptions may not necessarily reflect actual future conditions. To address this, Chapter 395 requires the monitoring of impact fees through the Impact Fee Advisory Committee and allows for the option to update or revise impact fees to reflect the actual implementation of the impact fee program.

Once the cost of capacity added that is attributable to growth (**Table 8** - line 14) is determined, it must then be decided how the cost will be financed: cash and/or debt. For any previously funded projects, whether partially funded or in full, actual costs of capital have been included. Based on discussions with City staff, it is assumed that the City will debt finance 67% of the future project costs and cash finance 33%. For debt financing, the cost of financing is based on the City staff's estimates of future debt costs for bonds issued with 20-year terms, as shown in **Appendix E**. Debt service payments for each future debt issue are assumed to remain constant over the issue's term.

Currently, the exact timing and annual level of capital expenditures over the 10-year forecast is indeterminate; therefore, it is assumed that capital expenditures will occur in equal amounts over the 10-year program period. It is also assumed that for debt financed capital projects, the City will expend debt proceeds over a 3-year timeframe. For the calculation of the maximum assessable impact fee, debt is assumed to be issued in equal amounts for each year. Because of the 10-year forecast limitation, and in order to recognize the full amount of debt to be issued for the cost of capacity added that is attributable to growth during the 10-year period, a portion of years 8, 9, and 10 are assumed to be spent in the final 3 years.

Because debt is issued over 20-year terms and impact fees developed herein are to be charged over a 10-year period, sufficient fund balance must be generated to meet the future debt service obligations. Because of the generation of the fund balance, excess monies will be available for interest earnings. Chapter 395 states that interest earnings are funds of the impact fee account and are to be held to the same restrictions as impact fee revenues. Therefore, in order to recognize that interest earnings are used to fund transportation improvements, interest earnings are credited against the costs recoverable through impact

fees. It should be noted that Chapter 395 does not require the upfront recognition of interest earnings in the impact fee determination; however, in an effort to acknowledge the time value of the impact fee payers' monies, interest earnings have been credited. Interest is assumed to be earned at an annual rate of 1.00% based on the Texas Cooperative Liquid Assets Securities System (CLASS) returns as of June 9, 2022.

As with the timing and level of the capital expenditures over the 10-year forecast, the timing and annual level of vehicle mile growth over the 10-year program period is indeterminate at the present time. As such, it is assumed that vehicle mile growth will be consistent over the 10-year forecast.

Chapter 395 requires a plan for awarding either a credit for the portion of ad valorem tax and/or utility service revenues generated by new vehicle miles during the program period that are used for payment of improvements that are included in the Transportation Impact Fee TIP. As an alternative, a credit equal to 50% of the total cost of implementing the Transportation Impact Fee TIP may be used. The City has elected to pursue the determination of a credit for the portion of ad valorem tax revenues generated by new service units (vehicle miles) during the program period that are used for payment of improvements that are included in the Transportation Impact Fee TIP. It should be noted that the credit is not a determination to recognize the total ad valorem tax revenue generated by new vehicle miles but is only a credit for the portion of ad valorem tax revenue that is used for payment of improvements that are included in the Transportation Impact Fee TIP. Theoretically, the credit determination could be zero (\$0) if the City does not utilize any of the new vehicle mile ad valorem tax revenue to fund improvements that are included in the Transportation Impact Fee TIP. However, to be conservative and recognize potential cash flow issues that can occur with the funding of major capital improvement projects, it is assumed that the debt-funded projects (67% of the improvement costs included in the Transportation Impact Fee TIP) could potentially be funded by ad valorem tax revenue.

Since payments made through ad valorem tax revenue will consist of not only the revenue generated by new service units (vehicle miles) in the defined service area, but also existing

property owners throughout the City, the portion attributable to the new vehicle miles in the defined service area must be isolated, as illustrated in the credit calculation in **Appendix E**.

The following summarizes the financial model's determination of the maximum assessable impact fee:

- Recoverable Impact Fee Transportation Improvements Costs (**Table 8**, line 14)
- Plus: Financing Costs (**Table 8**, line 15)
- Less: Interest Earnings (**Table 8**, line 16)
- Pre Credit Recoverable Costs for Impact Fee (**Table 8**, line 18)
- Less: Credit for Ad Valorem Revenues (**Table 8**, line 20)
- Maximum Recoverable Costs for Impact Fee (**Table 8**, line 21)

Table 8. Maximum Assessable Transportation Impact Fee

Note: Values in this table include rounding to the nearest dollar.

D. Service Unit Demand Per Unit of Development

The Transportation Impact Fee is determined by multiplying the impact fee rate by the number of service units projected for the proposed development. For this purpose, the City will utilize the Land Use/Vehicle-Mile Equivalency Table (LUVMET), presented in **Table 9**. This table lists the predominant land uses that may occur within the City of Fort Worth. For each land use, the development unit that defines the development's magnitude with respect to transportation demand is shown. Although every possible use cannot be anticipated, the majority of local uses are found in this table. The descriptions for each land use are presented in **Table 9**. If the exact use is not listed, one similar in trip-making characteristics can serve as a reasonable proxy. The individual land uses are grouped into categories, such as residential, office, commercial, industrial, and institutional.

The trip rates presented for each land use is a fundamental component of the LUVMET. The trip rate is the average number of trips generated during the afternoon peak hour by each land use per development unit. The next column in **Table 9**, if applicable to the land use, presents the number of trips to and from certain land uses reduced by pass-by trips, as previously discussed.

The definitive source of the trip generation and pass-by statistics is the *ITE Trip Generation Manual, 11th Edition*, the latest edition. This manual utilizes trip generation studies for a variety of land uses throughout the United States, and is the standard used by traffic engineers and transportation planners for traffic impact analysis, site design, and transportation planning. However, for land uses not contained within the 11th Edition of the *ITE Trip Generation Manual*, an alternative service unit demand could be calculated by completing a trip generation study based on the procedure identified in the *ITE Trip Generation Handbook*. If the land use is unknown or speculative and no alternative trip generation study is provided, the three non-residential land use categories represent the most common assumptions and should be used as default values. For basic (industrial) this is light industrial (ITE # 110). For service, this is general office (ITE #710). For retail, this is Shopping Center (ITE #820). These non-residential uses are used because they formulate the basis of the impact fee study.

To convert vehicle trips to vehicle-miles, it is necessary to multiply trips by trip length. The trip length values are based on the *National Household Travel Survey* performed by the FHWA. The other adjustment to trip length is the 50% origin-destination reduction to avoid double counting of trips. At this stage, another important aspect of the state law is applied – the limit on transportation service unit demand. If the adjusted trip length is above six (6) miles, the maximum trip length used for calculation is reduced to six (6) miles. This reduction, as discussed previously, limits the maximum trip length to the approximate size of the service areas.

The remaining column in the LUVMET shows the vehicle-miles per development unit. This number is the product of the trip rate and the maximum trip length. This number, previously referred to as the *Transportation Demand Factor*, is used in the impact fee to compute the number of service units attributed to each land use category. The number of service units is multiplied by the impact fee rate (established by City ordinance) in order to determine the impact fee for a development.

Table 9. Land Use / Vehicle-Mile Equivalency Table (LUVMET)

Land Use Category	ITE Land Use Code	Development Unit	Trip Gen Rate (Peak Hour)	Pass-by Rate	Pass-by Source	Trip Rate	Trip Length (mi)	Adj. For O-D	Adj. Trip Length (mi)	Max Trip Length (mi)	Veh-Mi Per Dev-Unit

Table 10. Land Use Descriptions

Land Use Category	ITE Land Use Code	Land Use Description
PORT AND TERMINAL		
Intermodal Truck Terminal	030	Point of good transfer between trucks or between trucks and rail
INDUSTRIAL		
General Light Industrial	110	Emphasis on activities other than manufacturing; typically employing fewer than 500 workers
Manufacturing	140	Primary activity is conversion of raw materials or parts into finished products
Warehousing	150	Devoted to storage of materials but may include office and maintenance areas
High-Cube Fulfillment Center Warehouse (Non-Sort)	155	Storage and consolidation of automatically-sorted manufactured goods prior to their distribution. Typically 200k+ sq. ft.
High-Cube Fulfillment Center Warehouse (Sort)	155	Storage and consolidation of manually-sorted manufactured goods prior to their distribution. Typically 200k+ sq. ft.
High-Cube Transload and Short-Term Storage Warehouse	154	Short term storage and high throughput of large volumes of manufactured goods. Typically 200k+ sq. ft.
Mini-Warehouse	151	Facilities with a number of units rented to others for the storage of goods
RESIDENTIAL		
Single-Family Detached Housing	210	Single-family detached homes on individual lots
Detached Multifamily Housing	215	1-4 rental dwelling units and one or two levels (floors) per building. Includes duplexes, condos, and townhomes.
Multifamily Housing (Low-Rise)	220	At least 4 rental dwelling units (Apartments) and two or three levels (floors) living space per building
Multifamily Housing (Mid-Rise)	221	At least 4 rental dwelling units (Apartments) and between four and ten levels (floors) living space per building
Multifamily Housing (High-Rise)	222	At least 4 rental dwelling units (Apartments) and more than ten levels (floors) living space per building
Senior Adult Housing-Single-Family	251	Consists of detached independent living developments that include amenities such as golf courses and swimming pools
Senior Adult Housing-Multifamily	252	Consists of attached independent living developments that include limited social or recreation services
Assisted Living	254	Residential settings that provide either routine general protective oversight or assistance with activities.
LODGING		
Hotel	310	Lodging facilities that typically have on-site restaurants, lounges, meeting and/or banquet rooms, or other retail shops and services
Motel / Other Lodging Facilities	320	Lodging facilities that may have small on-site restaurant or buffet area but little or no meeting space
RECREATIONAL		
Recreational Community Center	495	Category includes racquet clubs, health/fitness clubs, can include facilities such as YMCA's
Miniature Golf Course	431	One or more individual putting courses; category should not be used when part of a larger entertainment center(with batting cages, video game centers, etc)
Movie Theater	445	Movie theater with audience seating, minimum of ten screens, lobby, and refreshment area.
Racquet / Tennis Club	491	Indoor or outdoor facilities specifically designed for playing tennis
INSTITUTIONAL		
Church	560	Churches and houses of worship
Day Care Center	565	Generally includes facilities for care of pre-school aged children, generally includes classrooms, offices, eating areas, and playgrounds
Private School (K-12)*	532	Private education institution serving K-12 students
Charter School (K-12)*	538	Publicly funded and privately managed school serving K-12 students
Elementary School	520	Serves students who have not yet entered middle/junior high school
Middle School/Junior High School	522	Serve students who have completed elementary school
High School	525	Serves students who have completed middle or junior high school
Junior / Community College	540	Two-year junior, community, or technical colleges
University / College	550	Four-year universities or colleges that may or may not offer graduate programs
MEDICAL		
Clinic	630	Facilities with limited diagnostic and outpatient care
Hospital	610	Medical and surgical facilities with overnight accommodations
Nursing Home	620	Rest and convalescent homes with residents who do little or no driving
Free-Standing Emergency Room	650	Facility that specializes in personal medical care and treatment of people
Animal Hospital/Veterinary Clinic	640	Animal hospital or veterinary clinic that specializes in the treatment of animals
OFFICE		
Corporate Headquarters Building	714	Office building housing corporate headquarters of a single company or organization
General Office Building	710	Office buildings which house multiple tenants
Medical-Dental Office Building	720	Multi-tenant building with offices for physicians and/or dentists
Single Tenant Office Building	715	Single tenant office buildings other than corporate headquarters
Office Park	750	Office buildings (typically low-rise) in a campus setting and served by a common roadway system

Table 10 (Cont'd). Land Use Descriptions

Land Use Category	ITE Land Use Code	Land Use Description
COMMERCIAL		
Automobile Related		
Automobile Care Center	942	Automobile repair and servicing including stereo installations and upholstery
Automobile Parts Sales	843	Retail sale of auto parts but no on-site vehicle repair
Gasoline /Service Station	944	Gasoline sales without convenience store or car wash; may include repair
Convenience Store/Gas Station (2-8 fueling positions)	945	Gasoline sales with convenience store and car washes where the primary business is gasoline sales (<4.5k)
Convenience Store/Gas Station (9-15 fueling positions)	945	Gasoline sales with convenience store and car washes where the primary business is gasoline sales (>4.5k)
Convenience Store/Gas Station (>15 fueling positions)	945	Gasoline sales with convenience store and car washes where the primary business is gasoline sales (>4.5k)
Automobile Sales (New)	840	New car dealerships, typically with automobile servicing, part sales, and used car sales
Automobile Sales (Used)	841	Car dealership specializing in the sale of used cars
Quick Lubrication Vehicle Shop	941	Primary business is to perform oil changes and fluid/filter changes with other repair services not provided
Automated Car Wash	948	Has stalls for driver to park and wash the vehicle
Tire Store	848	Primary business is sales and installation of tires; usually do not have large storage or warehouse area
Dining		
Fast Food Restaurant with Drive-Thru Window	934	High-turnover fast food restaurant for carry-out and eat-in customers with a drive-thru window
Fast Food Restaurant without Drive-Thru Window	933	High-turnover fast food restaurant for carry-out and eat-in customers, but without a drive-thru window
High Turnover (Sit-Down) Restaurant	932	Restaurants with turnover rates less than one hour; typically includes moderately-priced chain restaurants
Fine Dining Restaurant	931	Restaurants with turnover rates of one hour or longer; typically require reservations
Drinking Place	975	Contains a bar where alcoholic beverages and food are sold, and possibly some type of entertainment
Coffee/Donut Shop with Drive-Thru Window	937	Coffee and Donut restaurants with drive-through windows, hold long store hours and have limited indoor seating
Other Retail		
Free-Standing Discount Store	815	Category includes free-standing stores with off-street parking; typically offer a variety of products and services with long store hours
Nursery (Garden Center)	817	Building with a yard of planting or landscape stock; may have office, storage, shipping or greenhouse facilities
Home Improvement Superstore	862	Warehouse-type facilities offering a large variety of products and services including lumber, tool, paint, lighting, and fixtures, among other items.
Pharmacy/Drugstore w/o Drive-Thru Window	880	Facilities that primarily sell prescription and non-prescription drugs without a drive-through window
Pharmacy/Drugstore w/ Drive-Thru Window	881	Facilities that primarily sell prescription and non-prescription drugs with a drive-through window
Shopping Center (>150k)	820	Integrated group of commercial establishments; planning, owned, and managed as a unit (>150k)
Shopping Plaza (40-150k)	821	Integrated group of commercial establishments; planning, owned, and managed as a unit (40-150k)
Strip Retail Plaza (<40k)	822	Integrated group of commercial establishments; planning, owned, and managed as a unit (<40k)
Supermarket	850	Primary business is sale of groceries, food, and household cleaning items; may include photo, pharmacy, video rental, and/or ATM
Toy/Children's Superstore	864	Businesses specializing in child-oriented merchandise
Department Store	875	Free-standing stores that specialize in the sale of apparel, footwear, bedding, home products, jewelry, etc.
SERVICES		
Walk-In Bank	911	Banks with their own parking lots, no drive-in lanes but contain non-drive-through ATMs
Drive-In Bank	912	Banking facilities to conduct financial transactions from the vehicle; also usually apart of walk-in bank
Hair Salon	918	Facilities that specialize in cosmetic and beauty services including hair cutting and styling

V. SAMPLE CALCULATIONS

The following section details two (2) examples of maximum assessable Transportation Impact Fee calculations.

Example 1:

Development Type - One (1) Unit of Single-Family Housing in Service Area A

Transportation Impact Fee Calculation Steps – Example 1	
Step 1	Determine Development Unit and Vehicle-Miles Per Development Unit
	<i>From Table 10 [Land Use – Vehicle-Mile Equivalency Table]</i> Development Type: 1 Dwelling Unit of Single-Family Detached Housing Number of Development Units: 1 Dwelling Unit Veh-Mi Per Development Unit: 4.61
Step 2	Determine Maximum Assessable Impact Fee Per Service Unit (Vehicle-Mile)
	<i>From Table 8, Line 22 [Maximum Assessable Fee Per Service Unit]</i> Service Area A: \$1,642
Step 3	Determine Maximum Assessable Impact Fee
	Impact Fee = # of Development Units * Veh-Mi Per Dev Unit * Max. Fee Per Service Unit Impact Fee = 1 * 4.61 * \$1,642 Maximum Assessable Impact Fee = \$7,570

Example 2:

Development Type – 125,000 square foot Home Improvement Superstore in Service Area D

Transportation Impact Fee Calculation Steps – Example 2	
Step 1	Determine Development Unit and Vehicle-Miles Per Development Unit
	<i>From Table 10 [Land Use – Vehicle-Mile Equivalency Table]</i> Development Type: 125,000 square feet of Home Improvement Superstore Development Unit: 1,000 square feet of Gross Floor Area Veh-Mi Per Development Unit: 3.33
Step 2	Determine Maximum Assessable Impact Fee Per Service Unit (Vehicle-Mile)
	<i>From Table 8, Line 22 [Maximum Assessable Fee Per Service Unit]</i> Service Area D: \$834
Step 3	Determine Maximum Assessable Impact Fee
	Impact Fee = # of Development Units * Veh-Mi Per Dev Unit * Max. Fee Per Service Unit Impact Fee = 125 * 3.33 * \$834 Maximum Assessable Impact Fee = \$347,152

VI. ADOPTION AND ADMINISTRATION OF TRANSPORTATION IMPACT FEES

A. Reauthorization Process

Chapter 395 of the Texas Local Government Code stipulates a specific process for the reauthorization of Transportation Impact Fees. A Capital Improvement Advisory Committee (CIAC) is required to review the Land Use Assumptions and Transportation Impact Fees TIP used in calculating the maximum fee, and to provide the Committee's findings for consideration by the City Council. This CIAC also reviews the Transportation Impact Fee ordinance and provides its findings to the City Council. The City Council then conducts a public hearing on the Transportation Impact Fee Study and the Transportation Impact Fee Ordinance.

Following policy adoption, the CIAC is tasked with advising the City Council of the need to update the Land Use Assumptions or the Transportation Impact Fees TIP at any time within five years of adoption. Finally, the CIAC oversees the proper administration of the Impact Fee program and advises the Council as necessary.

B. Collection and Use of Transportation Impact Fees

Transportation Impact Fees are assessed when a final plat is recorded. The assessment defines the impact of each unit at the time of platting, according to land use, and may not exceed the maximum impact fee allowed by law. Transportation Impact Fees are collected when a building permit is issued. Therefore, funds are not collected until development-impacts are introduced to the transportation system. Funds collected within a service area can be used only within the same service area. Finally, fees must be utilized within 10 years of collection, or must be refunded with interest.

VII. CONCLUSIONS

The City of Fort Worth has established a process to implement the assessment and collection of Transportation Impact Fees through the adoption of an impact fee ordinance that is consistent with Chapter 395 of the Texas Local Government Code.

This report establishes the maximum allowable Transportation Impact Fee that could be assessed by the City of Fort Worth, as shown in the previously referenced **Table 8**.

This document serves as a guide to the assessment of Transportation Impact Fees pertaining to future development, and the City’s need for transportation improvements to accommodate that growth.

In conclusion, it is our opinion that the data and methodology used in this analysis are appropriate and consistent with Chapter 395 of the Texas Local Government Code. Furthermore, the Land Use Assumptions and the proposed Transportation Impact Fee Transportation Improvements Plan are appropriately incorporated into the development of the maximum assessable Transportation Impact Fee.

Below is the listing of the 2022 Transportation Impact Fee Study’s Maximum Assessable Impact Fee Per Service Unit (Vehicle-Mile):

Service Area	Maximum Fee Per Service Unit (per Vehicle-Mile)	Service Area	Maximum Fee Per Service Unit (per Vehicle-Mile)
A	\$1,642	O	\$3,556
AA	\$355	PI	\$2,756
B	\$3,128	S	\$4,605
C	\$1,781	T	\$3,727
D	\$834	U	\$2,542
E	\$2,927	V	\$4,416
F	\$743	X	\$3,294
G	\$2,055	Y	\$2,588
M	\$6,367	Z	\$6,101
N	\$2,742

NOTES:

- These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
- Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

 updated: 5/26/2022

Project Information:		Description:	Project No.
Name:	Park Vista (3)	This project consists of the previously completed four-lane divided section neighborhood connector. The City contributed \$1,701,548 to this project.	A-19
Limits:	415' N of Timberland to Timberland		
Impact Fee Class:	NCO-L2-T0-NTMS-P0-BOP (110)		
Ultimate Class:	4 Lane Divided Neighborhood Connector		
Length (lf):	415		
Service Area(s):	A		
Impact Fee Project Cost TOTAL:			\$ 1,701,548

NOTE: The impact free project cost for this completed project is based on actual or budgeted construction costs provided by the City.

NOTES:
1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:
 1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
 2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:

- These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
- Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:
 1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
 2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:

1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth.

The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.

2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:

1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:

1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:

1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

	Intersection Improvements	Chapin	Alemeda	Rebuild	100%	\$ 2,500,000	\$ 2,500,000
Intersection Improvements	Chapin	Longvue	Rebuild	100%	\$ 2,500,000	\$ 2,500,000	
Intersection Improvements	Normandale	Alameda	Retrofit	100%	\$ 2,500,000	\$ 2,500,000	

NOTES:
1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:

- These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
- Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:

1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:

- These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
- Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

NOTES:
1. These cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The planning level cost projections shall not supersede the City's design standards or the determination of the City Engineer for a specific project.
2. Intersection Improvements will be determined based on the results of an intersection capacity evaluation (ICE), which will be performed by the City to determine the need for turn lanes, signalization, roundabouts, or other capacity-enhancing improvements.

6/3/2022

Project Information:		Description:	Project No. Z-46
Name:	Rendon	This project consists of the widening and reconstruction of the existing asphalt as a four-lane divided neighborhood connector.	
Limits:	Shelby to Oak Grove Shelby		
Impact Fee Class:	NCO-L2-T0-NTMS-P0-BOP (110)		
Ultimate Class:	4 Lane Divided Neighborhood Connector		
Length (lf):	2,555		
Service Area(s):	Z, ETJ		

Roadway Construction Cost Projection					
No.	Item Description	Quantity	Unit	Unit Price	Item Cost
130	Unclassified Street Excavation	7,381	cy	\$ 38.00	\$ 280,482
230	6" Lime Stabilization (with Lime @ 32#/sy)	14,194	sy	\$ 8.00	\$ 113,556
330	11" Concrete Pavement	13,059	sy	\$ 120.00	\$ 1,567,067
430	6" Curb and Gutter	10,220	lf	\$ 15.00	\$ 153,300
530	4" Topsoil	12,491	sy	\$ 5.00	\$ 62,456
630	10' Concrete Sidewalk	51,100	sf	\$ 10.00	\$ 511,000
728	Auxiliary Lanes and Median Openings Allotment	1,026	sf	\$ 128.00	\$ 131,312
Paving Construction Cost Subtotal:					\$ 2,819,172
Major Construction Component Allowances:					
Item Description	Notes	Allowance	Item Cost		
√ Prep ROW		3%	\$	84,575	
√ Traffic Control	Construction Phase Traffic Control	3%	\$	84,575	
√ Pavement Markings/Markers		2%	\$	56,383	
√ Roadway Drainage	Standard Internal System	20%	\$	563,834	
√ Illumination		3%	\$	74,870	
Special Drainage Structures	None Anticipated		\$	-	
√ Water/Sewer	Minor Adjustments	7%	\$	197,342	
√ Establish Turf / Erosion Control		1%	\$	28,192	
√ Basic Landscaping		2%	\$	56,383	
Other:		\$0	\$	-	
Allowance Subtotal:					\$ 1,146,155
Paving and Allowance Subtotal:					\$ 3,965,326
Construction Contingency:					\$ 594,799
Construction Cost TOTAL:					\$ 4,561,000

Impact Fee Project Cost Summary			
Item Description	Notes:	Allowance	Item Cost
Construction:		-	\$ 4,561,000
Engineering/Survey/Testing:		18%	\$ 820,980
Mobilization		5%	\$ 228,050
Previous City contribution			\$ -
Other			\$ -
ROW/Easement Acquisition:	Existing Alignment	10%	\$ 456,100
Impact Fee Project Cost TOTAL:			\$ 6,066,000

NOTE: The planning level cost projections listed in this appendix have been developed for Impact Fee calculations only and should not be used for any future Capital Improvement Planning within the City of Fort Worth. The cost was rounded to the nearest \$1,000.

The planning level cost projections shall not supersede the City's design standards contained or the determination of the City Engineer for a specific project.

1. Veh-Mi Supply Pk-Hr Total = [Length (mi)] * [Exist Lanes] * [Veh-Mi Capacity Pk-Hr Per Ln] * [% in Service Area]
 2. Veh-Mi Demand Pk-Hr Total = [Length (mi)] * [PM Peak Hour Vol] * [% in Service Area]
 3. Excess Capacity Pk-Hr Veh-Mi = [Veh-Mi Supply Pk-Hr Total] - [Veh-Mi Demand Pk-Hr Total]
 4. Line 11 / Line 5 from Table 8
 Note: Mileage lengths are shown as rounded to the nearest 0.01. Actual calculations were performed using exact mileage length [Length (ft) / 5,280].

**Appendix D – Summary of Transportation Impact Fee Credit
Determination**
(as prepared by NewGen Strategies.)

SUMMARY OF ROADWAY IMPACT FEE DETERMINATION

Service Area A

Recoverable Impact Fee CIP Costs	\$ 87,165,388	Table 8
Financing Cost	22,686,992	See Detail Below
Interest Earnings	(8,103,747)	Roadway Appendices - page 4
Pre Credit Recoverable Cost for Impact Fee	\$ 98,877,423	Sum of Above
Credit for Ad Valorem Revenues	(2,052,228)	Roadway Appendices - page 7
Maximum Recoverable Cost for Impact Fee	\$ 96,825,195	

Recoverable Impact Fee CIP Costs:

Represents the portion of capital improvement costs that are eligible for funding through Impact fees. Reference is Kimley-Horn Impact Fee Study.

Financing Costs:

Represents the interest costs associated with debt financing the new Impact fee project costs. Interest costs are derived from existing debt issues and forecasted debt issues.

New Annual Debt Service	\$ 81,191,428	Roadway Appendices - page 2
Existing Annual Debt Service	2,751,382	Roadway Appendices - page 3
Principal Component (New and Existing Debt)	(61,255,819)	Roadway Appendices - page 1
Financing Costs	\$ 22,686,992	

Interest Earnings:

Represents the interest earned on cash flows and assumes a 1.00% annual interest rate.

The Impact Fee Statute states that interest earnings are funds of the Impact fee account and are held to the same restrictions as Impact fee revenues. Therefore in order to recognize that interest earnings are used to fund capital improvements, interest earnings are credited against the recoverable costs.

Reference is the sum of Accumulated Interest on page 4 of Roadway Appendices.

Pre Credit Recoverable Cost for Impact Fee:

Represents Recoverable Impact Fee CIP Costs plus Financing Costs less Existing Fund Balance and Interest Earnings.

Credit for Ad Valorem Revenues:

In 2001, the LGC Chapter 395 was amended to include a credit for ad valorem and utility revenues generated by new service units during the ten-year timeframe that are used to fund Impact fee eligible projects for which the new service units were charged an Impact fee. The intent of this amendment is to avoid double-charging the new service units for Impact fee capital improvements. The credit recognizes ad valorem revenues used to fund the debt service of debt financed Impact fee eligible projects and assumes that all non-debt funded impact fee eligible project costs will be funded solely through impact fee revenues or non-ad valorem revenue sources. Reference is page 7 of Roadway Appendices.

Maximum Recoverable Cost for Impact Fee:

Represents Pre Credit Recoverable Cost for Impact Fee less Credit for Ad Valorem Revenues.

This is the maximum cost that can be recovered through Impact fees.

SUMMARY OF ROADWAY IMPACT FEE DETERMINATION

Service Area AA

Recoverable Impact Fee CIP Costs	\$ 27,835,914	Table 8
Financing Cost	11,784,312	See Detail Below
Interest Earnings	(3,052,661)	Roadway Appendices - page 4
Pre Credit Recoverable Cost for Impact Fee	\$ 34,988,677	Sum of Above
Credit for Ad Valorem Revenues	(1,213,190)	Roadway Appendices - page 7
Maximum Recoverable Cost for Impact Fee	\$ 33,775,487	

Recoverable Impact Fee CIP Costs:

Represents the portion of capital improvement costs that are eligible for funding through Impact fees. Reference is Kimley-Horn Impact Fee Study.

Financing Costs:

Represents the interest costs associated with debt financing the new Impact fee project costs. Interest costs are derived from existing debt issues and forecasted debt issues.

New Annual Debt Service	\$ 30,415,019	Roadway Appendices - page 2
Existing Annual Debt Service	-	Roadway Appendices - page 3
Principal Component (New and Existing Debt)	(18,630,707)	Roadway Appendices - page 1
Financing Costs	\$ 11,784,312	

Interest Earnings:

Represents the interest earned on cash flows and assumes a 1.00% annual interest rate.

The Impact Fee Statute states that interest earnings are funds of the Impact fee account and are held to the same restrictions as Impact fee revenues. Therefore in order to recognize that interest earnings are used to fund capital improvements, interest earnings are credited against the recoverable costs.

Reference is the sum of Accumulated Interest on page 4 of Roadway Appendices.

Pre Credit Recoverable Cost for Impact Fee:

Represents Recoverable Impact Fee CIP Costs plus Financing Costs less Existing Fund Balance and Interest Earnings.

Credit for Ad Valorem Revenues:

In 2001, the LGC Chapter 395 was amended to include a credit for ad valorem and utility revenues generated by new service units during the ten-year timeframe that are used to fund Impact fee eligible projects for which the new service units were charged an Impact fee. The intent of this amendment is to avoid double-charging the new service units for Impact fee capital improvements. The credit recognizes ad valorem revenues used to fund the debt service of debt financed Impact fee eligible projects and assumes that all non-debt funded impact fee eligible project costs will be funded solely through impact fee revenues or non-ad valorem revenue sources. Reference is page 7 of Roadway Appendices.

Maximum Recoverable Cost for Impact Fee:

Represents Pre Credit Recoverable Cost for Impact Fee less Credit for Ad Valorem Revenues.

This is the maximum cost that can be recovered through Impact fees.

SUMMARY OF ROADWAY IMPACT FEE DETERMINATION

Service Area B

Recoverable Impact Fee CIP Costs	\$ 192,466,198	Table 8

Maximum Recoverable Cost for Impact Fee:

Represents Pre Credit Recoverable Cost for Impact Fee less Credit for Ad Valorem Revenues.

This is the maximum cost that can be recovered through Impact fees.

SUMMARY OF ROADWAY IMPACT FEE DETERMINATION

Service Area C

Recoverable Impact Fee CIP Costs	\$ 136,787,527	Table 8
Financing Cost	54,465,075	See Detail Below
Interest Earnings	(14,379,853)	Roadway Appendices - page 4
Pre Credit Recoverable Cost for Impact Fee	\$ 171,277,844	Sum of Above
Credit for Ad Valorem Revenues	(5,709,797)	Roadway Appendices - page 7
Maximum Recoverable Cost for Impact Fee	\$ 165,568,047	

Recoverable Impact Fee CIP Costs:

Represents the portion of capital improvement costs that are eligible for funding through Impact fees. Reference is Kimley-Horn Impact Fee Study.

Financing Costs:

Represents the interest costs associated with debt financing the new Impact fee project costs. Interest costs are derived from existing debt issues and forecasted debt issues.

New Annual Debt Service	\$ 143,183,831	Roadway Appendices - page 2
Existing Annual Debt Service	4,840,817	Roadway Appendices - page 3
Principal Component (New and Existing Debt)	(93,559,573)	Roadway Appendices - page 1
Financing Costs	\$ 54,465,075	

Interest Earnings:

Represents the interest earned on cash flows and assumes a 1.00% annual interest rate.

The Impact Fee Statute states that interest earnings are funds of the Impact fee account and are held to the same restrictions as Impact fee revenues. Therefore in order to recognize that interest earnings are used to fund capital improvements, interest earnings are credited against the recoverable costs.

Reference is the sum of Accumulated Interest on page 4 of Roadway Appendices.

Pre Credit Recoverable Cost for Impact Fee:

Represents Recoverable Impact Fee CIP Costs plus Financing Costs less Existing Fund Balance and Interest Earnings.

Credit for Ad Valorem Revenues:

In 2001, the LGC Chapter 395 was amended to include a credit for ad valorem and utility revenues generated by new service units during the ten-year timeframe that are used to fund Impact fee eligible projects for which the new service units were charged an Impact fee. The intent of this amendment is to avoid double-charging the new service units for Impact fee capital improvements. The credit recognizes ad valorem revenues used to fund the debt service of debt financed Impact fee eligible projects and assumes that all non-debt funded impact fee eligible project costs will be funded solely through impact fee revenues or non-ad valorem revenue sources. Reference is page 7 of Roadway Appendices.

Maximum Recoverable Cost for Impact Fee:

Represents Pre Credit Recoverable Cost for Impact Fee less Credit for Ad Valorem Revenues.

This is the maximum cost that can be recovered through Impact fees.

Maximum Recoverable Cost for Impact Fee	\$ 42,415,803	

Recoverable Impact Fee CIP Costs:

Represents the portion of capital improvement costs that are eligible for funding through Impact fees. Reference is Kimley-Horn Impact Fee Study.

Financing Costs:

Represents the interest costs associated with debt financing the new Impact fee project costs. Interest costs are derived from existing debt issues and forecasted debt issues.

New Annual Debt Service	\$ 36,748,134	Roadway Appendices - page 2
Existing Annual Debt Service	-	Roadway Appendices - page 3
Principal Component (New and Existing Debt)	(22,510,054)	Roadway Appendices - page 1
Financing Costs	\$ 14,238,080	

Interest Earnings:

Represents the interest earned on cash flows and assumes a 1.00% annual interest rate.

The Impact Fee Statute states that interest earnings are funds of the Impact fee account and are held to the same restrictions as Impact fee revenues. Therefore in order to recognize that interest earnings are used to fund capital improvements, interest earnings are credited against the recoverable costs.

Reference is the sum of Accumulated Interest on page 4 of Roadway Appendices.

Pre Credit Recoverable Cost for Impact Fee:

Represents Recoverable Impact Fee CIP Costs plus Financing Costs less Existing Fund Balance and Interest Earnings.

Credit for Ad Valorem Revenues:

In 2001, the LGC Chapter 395 was amended to include a credit for ad valorem and utility revenues generated by new service units during the ten-year timeframe that are used to fund Impact fee eligible projects for which the new service units were charged an Impact fee. The intent of this amendment is to avoid double-charging the new service units for Impact fee capital improvements. The credit recognizes ad valorem revenues used to fund the debt service of debt financed Impact fee eligible projects and assumes that all non-debt funded impact fee eligible project costs will be funded solely through impact fee revenues or non-ad valorem revenue sources. Reference is page 7 of Roadway Appendices.

Maximum Recoverable Cost for Impact Fee:

Represents Pre Credit Recoverable Cost for Impact Fee less Credit for Ad Valorem Revenues.

This is the maximum cost that can be recovered through Impact fees.

4	1,863,071	5.50%	20
5	1,863,071	5.50%	20
6	1,863,071	5.50%	20
7	1,863,071	5.50%	20
8	1,863,071	5.50%	20
9	1,863,071	5.50%	20
10	1,863,071	5.50%	20
Total	\$ 18,630,707		

III. Capital Expenditure Assumptions

<u>Year</u>	<u>Annual Capital Expenditures ⁽⁹⁾</u>
1	\$ 920,521
2	1,541,544
3	2,162,568
4	2,783,591
5	2,783,591
6	2,783,591
7	2,783,591
8	2,783,591
9	2,783,591
10	2,783,591
11	1,863,071
12	1,242,047
13	621,024
Total	27,835,914

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

9	16,816,434
10	16,816,434
11	11,265,075
12	7,510,050
13	3,755,025
Total	168,164,336

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

Impact Fee Calculation Assumptions
Appendix E - Impact Fee Calculation Assumptions
Service Area D

I. General Assumptions

Annual Interest Rate on Deposits ⁽¹⁾	1.00%
Annual Vehicle Mile Growth ⁽²⁾	8,157
Existing Fund Balance ⁽³⁾	2,098,417
Portion of Projects Funded by Existing Debt ⁽³⁾	\$ 13,680,199
Non-debt Funded Project Cost ⁽⁴⁾	18,635,733
New Project Cost Funded Through New Debt ⁽⁵⁾	32,787,201
Total Recoverable Project Cost ⁽⁶⁾	\$ 65,103,133

II. New Debt Issues Assumptions

<u>Year</u>	<u>Principal ⁽⁷⁾</u>	<u>Interest ⁽⁸⁾</u>	<u>Term</u>
1	\$ 3,278,720	3.97%	20
2	3,278,720	4.50%	20
3	3,278,720	5.00%	20
4	3,278,720	5.50%	20
5	3,278,720	5.50%	20
6	3,278,720	5.50%	20
7	3,278,720	5.50%	20
8	3,278,720	5.50%	20
9	3,278,720	5.50%	20
10	3,278,720	5.50%	20
Total	\$ 32,787,201		

III. Capital Expenditure Assumptions

<u>Year</u>	<u>Annual Capital Expenditures ⁽⁹⁾</u>
1	\$ 1,863,573
2	2,956,480
3	4,049,387
4	5,142,293
5	5,142,293
6	5,142,293
7	5,142,293
8	5,142,293
9	5,142,293
10	5,142,293
11	3,278,720
12	2,185,813
13	1,092,907
Total	51,422,934

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
Non-debt funded capital expenditures allocated per discussions with City Staff

I. General Assumptions

Annual Interest Rate on Deposits ⁽¹⁾	1.00%
Annual Vehicle Mile Growth ⁽²⁾	10,925
Existing Fund Balance ⁽³⁾	5,510,714
Portion of Projects Funded by Existing Debt ⁽³⁾	\$ 5,085,510
Non-debt Funded Project Cost ⁽⁴⁾	83,814,424
New Project Cost Funded Through New Debt ⁽⁵⁾	170,110,028
Total Recoverable Project Cost ⁽⁶⁾	\$ 259,009,962

II. New Debt Issues Assumptions

<u>Year</u>	<u>Principal ⁽⁷⁾</u>	<u>Interest ⁽⁸⁾</u>	<u>Term</u>
1	\$ 17,011,003	3.97%	20
2	17,011,003	4.50%	20
3	17,011,003	5.00%	20
4	17,011,003	5.50%	20
5	17,011,003	5.50%	20
6	17,011,003	5.50%	20
7	17,011,003	5.50%	20
8	17,011,003	5.50%	20
9	17,011,003	5.50%	20
10	17,011,003	5.50%	20
Total	\$ 170,110,028		

III. Capital Expenditure Assumptions

<u>Year</u>	<u>Annual Capital Expenditures ⁽⁹⁾</u>
1	\$ 8,381,442
2	14,051,777
3	19,722,111
4	25,392,445
5	25,392,445
6	25,392,445
7	25,392,445
8	25,392,445
9	25,392,445
10	25,392,445
11	17,011,003
12	11,340,669
13	5,670,334
Total	253,924,452

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

13	535,199
Total	23,993,034

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

9	6,356,735
10	6,356,735
11	4,257,077
12	2,838,051
13	1,419,026
Total	63,567,352

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
Non-debt funded capital expenditures allocated per discussions with City Staff

9	9,260,555
10	9,260,555
11	6,195,195
12	4,130,130
13	2,065,065
Total	92,605,554

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

7	2,268,538
8	2,268,538
9	2,268,538
10	2,268,538
11	1,517,985
12	1,011,990
13	505,995
Total	22,685,376

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

11	1,203,364
12	802,243
13	401,121
Total	17,989,552

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

Impact Fee Calculation Assumptions
Appendix E - Impact Fee Calculation Assumptions
Service Area S

I. General Assumptions

Annual Interest Rate on Deposits ⁽¹⁾	1.00%
Annual Vehicle Mile Growth ⁽²⁾	4,014
Existing Fund Balance ⁽³⁾	732,365
Portion of Projects Funded by Existing Debt ⁽³⁾	\$ 957,381
Non-debt Funded Project Cost ⁽⁴⁾	47,547,171
New Project Cost Funded Through New Debt ⁽⁵⁾	95,644,429
Total Recoverable Project Cost ⁽⁶⁾	\$ 144,148,981

II. New Debt Issues Assumptions

<u>Year</u>	<u>Principal ⁽⁷⁾</u>	<u>Interest ⁽⁸⁾</u>	<u>Term</u>
1	\$ 9,564,443	3.97%	20
2	9,564,443	4.50%	20
3	9,564,443	5.00%	20
4	9,564,443	5.50%	20
5	9,564,443	5.50%	20
6	9,564,443	5.50%	20
7	9,564,443	5.50%	20
8	9,564,443	5.50%	20
9	9,564,443	5.50%	20
10	9,564,443	5.50%	20
Total	\$ 95,644,429		

III. Capital Expenditure Assumptions

<u>Year</u>	<u>Annual Capital Expenditures ⁽⁹⁾</u>
1	\$ 4,754,717
2	7,942,865
3	11,131,012
4	14,319,160
5	14,319,160
6	14,319,160
7	14,319,160
8	14,319,160
9	14,319,160
10	14,319,160
11	9,564,443
12	6,376,295
13	3,188,148
Total	143,191,600

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

6	3,398,046
7	3,398,046
8	3,398,046
9	3,398,046
10	3,398,046
11	2,274,755
12	1,516,503
13	758,252
Total	33,980,458

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
Non-debt funded capital expenditures allocated per discussions with City Staff

- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
Non-debt funded capital expenditures allocated per discussions with City Staff

Impact Fee Calculation Assumptions
Appendix E - Impact Fee Calculation Assumptions
Service Area V

I. General Assumptions

Annual Interest Rate on Deposits ⁽¹⁾	1.00%
Annual Vehicle Mile Growth ⁽²⁾	961
Existing Fund Balance ⁽³⁾	1,499,147
Portion of Projects Funded by Existing Debt ⁽³⁾	\$ -
Non-debt Funded Project Cost ⁽⁴⁾	11,115,930
New Project Cost Funded Through New Debt ⁽⁵⁾	22,510,054
Total Recoverable Project Cost ⁽⁶⁾	\$ 33,625,984

II. New Debt Issues Assumptions

<u>Year</u>	<u>Principal ⁽⁷⁾</u>	<u>Interest ⁽⁸⁾</u>	<u>Term</u>
1	\$ 2,251,005	3.97%	20
2	2,251,005	4.50%	20
3	2,251,005	5.00%	20
4	2,251,005	5.50%	20
5	2,251,005	5.50%	20
6	2,251,005	5.50%	20
7	2,251,005	5.50%	20
8	2,251,005	5.50%	20
9	2,251,005	5.50%	20
10	2,251,005	5.50%	20
Total	\$ 22,510,054		

III. Capital Expenditure Assumptions

<u>Year</u>	<u>Annual Capital Expenditures ⁽⁹⁾</u>
1	\$ 1,111,593
2	1,861,928
3	2,612,263
4	3,362,598
5	3,362,598
6	3,362,598
7	3,362,598
8	3,362,598
9	3,362,598
10	3,362,598
11	2,251,005
12	1,500,670
13	750,335
Total	33,625,984

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

Service Area X

I. General Assumptions

Annual Interest Rate on Deposits ⁽¹⁾	1.00%
Annual Vehicle Mile Growth ⁽²⁾	3,639
Existing Fund Balance ⁽³⁾	698,827
Portion of Projects Funded by Existing Debt ⁽³⁾	\$ -
Non-debt Funded Project Cost ⁽⁴⁾	30,706,318
New Project Cost Funded Through New Debt ⁽⁵⁾	62,284,478
Total Recoverable Project Cost ⁽⁶⁾	\$ 92,990,796

II. New Debt Issues Assumptions

<u>Year</u>	<u>Principal ⁽⁷⁾</u>	<u>Interest ⁽⁸⁾</u>	<u>Term</u>
1	\$ 6,228,448	3.97%	20
2	6,228,448	4.50%	20
3	6,228,448	5.00%	20
4	6,228,448	5.50%	20
5	6,228,448	5.50%	20
6	6,228,448	5.50%	20
7	6,228,448	5.50%	20
8	6,228,448	5.50%	20
9	6,228,448	5.50%	20
10	6,228,448	5.50%	20
Total	\$ 62,284,478		

III. Capital Expenditure Assumptions

<u>Year</u>	<u>Annual Capital Expenditures ⁽⁹⁾</u>
1	\$ 3,070,632
2	5,146,781
3	7,222,930
4	9,299,080
5	9,299,080
6	9,299,080
7	9,299,080
8	9,299,080
9	9,299,080
10	9,299,080
11	6,228,448
12	4,152,299
13	2,076,149
Total	92,990,796

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff

12	10,211,786
13	5,105,893
Total	229,780,470

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
Non-debt funded capital expenditures allocated per discussions with City Staff

5	32,343,370
6	32,343,370
7	32,343,370
8	32,343,370
9	32,343,370
10	32,343,370
11	21,644,934
12	14,429,956
13	7,214,978
Total	323,433,704

- (1) Texas CLASS June 2022
- (2) Per Kimley-Horn Impact Fee Study
- (3) Per Kimley-Horn and discussions with Staff
- (4) This assumes 33% of new project costs funded through sources other than debt, unless specified otherwise
- (5) This assumes 67% of new project costs funded through new debt issues, unless specified otherwise
- (6) Kimley-Horn Impact Fee Study
- (7) Assumes new debt issued in equal amounts every 3 years, per City Staff
- (8) Estimated interest on future debt from City Staff and Financial Advisor Model - June 2022
- (9) Assumes new debt proceeds expended over a 3-year timeframe
 Non-debt funded capital expenditures allocated per discussions with City Staff
