---	--

The City's Railroad Safety Program is to improve railroad crossing safety and to create Quiet Zones to minimize train noise. The Program improves railroad crossings citywide by upgrading crossing equipment, developing quiet zones and raising public awareness about crossing safety.

The Federal Railroad Administration (FRA) Train Horn Rule which became effective June 2005 granted the City the authority to create quiet zones at railroad crossings. The City may implement a quiet zone project if a crossing is suitable for adding quiet zone devices and if project funding has been secured.
