

Top 5 Impacts on Citizens When Procurement Teams Use Bonfire

1. **Better Deals on Goods and Services**

Bonfire is designed to encourage multiple vendors to submit responses to bids. More vendors submitting bids creates healthy competition, meaning the municipality has an opportunity for better deals, whether it comes down to cost alone or higher value service for a fair price.

2. **Faster Procurement means Faster Results**

A faster turnaround of procurement projects means faster results for the community. In fact, Bonfire has proven that most clients can run projects two times as fast.

3. **Transparency**

Plain and simple: Bonfire enables dashboards and reports so procurement teams can quickly and easily share information about how funds are being allocated, whether that means how taxpayer dollars or grants are being spent.

4. **Cost savings**

Clients using the Bonfire sourcing platform save an average of 12% on projects. Imagine what that means when your city is purchasing a new fire truck or completing sewage maintenance. It leaves the door open for cost savings to be reinvested into new areas in the community.

5. **100% Compliance**

This doesn't seem exciting at first, but it's important to note so that citizens can have peace of mind knowing that their government is completely in align with the law. Those using Bonfire are automatically spending money in a way that is 100% compliant because the platform has built-in tools that ensure it. Therefore, you won't have to read about your government being caught up in any spend scandals!
